

Installing miniconda for local development

Steps - Watch: <https://www.youtube.com/watch?v=AgnAs0nPEVg>

1. <https://docs.anaconda.com/miniconda/>
2. Scroll down to Miniconda Installers.
3. Download the Windows installer
4. Run the installer
5. Recommended options:
 - a. Just Me
 - b. Add Miniconda3 to PATH
 - c. Register Miniconda3 as the default Python
6. Search for Anaconda Prompt in the Windows start menu and open it.
7. Verify Conda is installed
 - a. `conda --version`
8. Update Conda (recommended)
 - a. `conda update conda`
9. Create a new environment
 - a. `conda create -n mlcourse python=3.11`
10. Activate the environment
 - a. `conda activate mlcourse`

Installing libraries

conda activate mlcourse

conda install -c conda-forge <library_name>

- pandas
- jupyter
- ipython
- numpy
- pandas
- scikit-learn
- matplotlib
- seaborn
- plotly
- pymysql

*conda install -c conda-forge pandas jupyter ipython numpy scikit-learn matplotlib seaborn plotly
catboost xgboost pymysql*

Install VSCode

<https://code.visualstudio.com/download>

- Recommended install options:
 - Add “Open with Code” to context menu
 - Add to PATH (important)
- Install extensions (extensions tab on the left):
 - Python
 - Jupyter
- Select your Conda environment as interpreter
 - Press Ctrl+Shift+P
 - Search: Python: Select Interpreter
 - Pick the one ending in mlcourse (or whatever env name you chose)
